SUMMARY

Software Developer at HCLTech with hands-on experience in **SAP BTP, SAP Build Process Automation, SAP Fiori, and SAP UI5**. Experienced in building **workflow and business process automations**, SAP GUI automations, and integrations using **Python and REST APIs**. Strong foundation in **AI/ML and NLP**, with experience developing AI-powered applications and backend solutions using **Python, FastAPI, and APIs**.

PROFESSIONAL EXPERIENCE

HCLTech, SAP BTP 12/2025 – Present

- Developed **SAP BTP automations** to extract invoice data, write it to Excel, and send automated email notifications to users.
- Worked with **SAP GUI automation**, including recording and capturing SAP transactions for process automation.
- Created and configured **Actions and Triggers** in SAP Build Process Automation.
- Worked on **workflow development, testing, debugging, and validation** to ensure smooth automation execution.
- Gained exposure to **SAP Joule** and currently practicing its capabilities and use cases.
- Collaborated with team members to understand requirements and implement automation enhancements

EDUCATION

B.tech CSE 11/2021 – 06/2025 | 80%
Meerut Institute of Engineering and Technology

Intermediate 04/2020 – 03/2021 | 89.6%
Vardhman Academy

High School 04/2018 – 03/2019 | 82%
Vardhman Academy

SKILLS

Programming: Python, Java, SQL, C

Concepts: Machine Learning, NLP, RAG, Data Analysis, OOP, DSA, SDLC

Frameworks/Tools: Flask, scikit-learn, Git, GitHub, SAP BTP, SAP Fiori (UI5)

Deployment: Linux, Render

PROJECTS

ScraperAgent — AI-Powered Candidate Search & Screening Platform 08/2026 – 08/2026

Tech Stack: Python, FastAPI, JavaScript, Tavily API, DuckDuckGo, REST APIs, Redis, Render

- Built an **AI-powered candidate discovery platform** that searches the web for relevant candidate profiles based on **Job Description, role, experience, and location**.
- Developed a **multi-query search and ranking pipeline** using Tavily and DuckDuckGo to improve candidate coverage, relevance, deduplication, and result quality.
- Implemented intelligent **experience and location extraction/filtering**, including support for location aliases and varied experience formats.
- Added **backend result caching with Redis** to avoid repeated searches for identical JDs, reducing unnecessary API calls and improving response time.
- Built and deployed a **FastAPI backend on Render** with a responsive JavaScript frontend and comprehensive automated test coverage.

News Classifier with RAG (NLP Project) 06/2026

- Built a news classification system using machine learning and NLP techniques
- Implemented text preprocessing and TF-IDF vectorization for feature extraction
- Integrated Retrieval-Augmented Generation (RAG) to improve context-aware predictions
- Designed pipeline combining retrieval and classification for better accuracy
- Developed using Python and scikit-learn with structured data handling

Predict AI – ML Prediction System 06/2025

- Developed a modular ML system supporting classification and regression
- Achieved 89% accuracy on datasets up to 2,000 records
- Exposed predictions via REST APIs with optimized response time

CERTIFICATES

- SAP certified-Positioning SAP business AI Platform
- Generative AI – The Ultimate Guide: Beginner to Leader in AI - Udemy
- Introduction to Data Science-Infosys
- Scientific Computing with Python – freeCodeCamp
